At DPW Solar, we specialize in engineering, designing and manufacturing turn-key PV Power Generation Systems for many different applications. We know solar and hybrid power systems and we know what it takes to provide the right combination of quality products and proven technologies. Our relentless drive to develop reliable and cost effective power solutions is matched only by our dedication to providing dependable customer support. So, no matter what your power application demands, we have the right set of solutions to meet your needs.

Applications

- Telecommunications
- SCADA Equipment
- Emergency Back-up Power
- Stand Alone Lighting
- Water Pumping
- Oil & Gas Flow Metering
- Remote Communications

Packaged Solar Power Systems offer an economical and reliable energy source for powering remote sites that already incorporate diesel generators. A solar system greatly reduces fuel consumption and long term maintenance costs.

Packaged Power System Features

- Factory built, ready to operate on site
- Self-contained, long term reliable systems
- Renewable clean energy source, no refueling required
- Quiet operation with no moving parts to fail
- Systems install quickly and require minimal maintenance
- Economical solution for remote locations where utility power is unavailable
- Equipped with high efficiency PV solar modules and solid state controls
- Long-life, deep-cycle batteries protected in insulated enclosure
- Each system designed for site load requirements including night time operation and extended periods of cloudy weather
- High strength mounting structures are wind load rated with corrosion resistant components
- Rugged enclosures provide superior environmental protection for equipment
- Hybrid Power system options with backup wind or gas generators
- Optional inverters for AC loads

Mounting Options

- Trailer
- Skid Mount
- Pad Mount
- Pole Mount
- Tower Mount
- Portable Container
